

Examples of CWGC Signs and fixing methods

Attached to masonry:

When fixing Signs to walls and masonry we will normally use nonferrous screws and rawlplugs. We will always try to fit signs into the joints in the masonry so to avoid drilling into the important fabric of walls and stone work. If considering a stone or flint wall location, please ensure the sign can lie flat against the wall. Signs come with no pre-drilled holes; any fixing work is done on site and is specific to each location.

Attached to metal railings or gates:

The Sign is fixed in place with a bracket and adjustable metal ties.

NB: Signs are now grey on the reverse, not white.

Attached to noticeboard:

Appropriate fixing plates would be attached to the noticeboard, fixing the Sign in place by use of a brackets or screws. Signs can also be attached to the legs of the noticeboard.

Attached to existing post:

The Sign is fixed with brackets or screws to an existing metal or wooden post.
